

Centrifugal pump NKG - 150-125

Pump NB - 100-315

During the period between 19-21.10.2016, a team of employees of SARDICH MC DOOEL, Skopje paid an official visit to one of GRUNDFOS' factories, GMH4, in Székesfehérvár (near lake Balaton), Hungary, which opened in 2007 at an area of 24,000m² and manufactures pumps for handling various types of fluids and with various production capacities.

The company accounts for 50% of the global production of pumps, averaging 10 million pieces annually.

During the visit, the team was informed about the production program of the company, the testing equipment for the finished product, the packaging system, the method of keeping records and making reports on each individual product, and the principles of implementation of the ISO quality standards in the production and delivery of the product to the Customer.

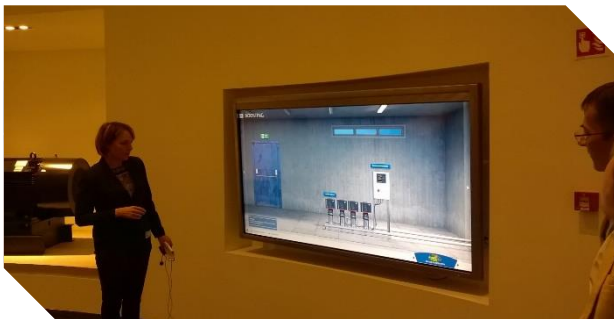

The visit included a presentation of a part of the product range consisting of pumps similar to the ones planned for the production in the system for the Kazandol Complex.

During the factory visit, SARDICH MC's team had the opportunity to observe firsthand the pump testing process being carried out in the test center.

Before delivery to the Customer, each pump is tested in at least three different locations.

In the Detailed Design of the Mining Complex for cathode copper production Kazandol, Valandovo, some of the designed construction facilities involve procurement and installation of about 40 (fourty) different types of pumps providing transport of the solutions and liquids in the Complex accommodating the production cycles for leaching, extraction, and electrowinning, namely: Production Plant, Pump Station 1, Pump Station 2, and Technical Water Supply System.
